Program Overview	Provides candidates with the ability to understand and evaluate production and inventory activities within a company's global operations.	Helps candidates demonstrate their knowledge and organizational skills for developing more streamlined operations across the extended supply chain.	Enables candidates to learn techniques for managing and measuring the performance of a global supply chain utilizing the Supply Chain Operations Reference (SCOR®) model.
Area of content	CPIM focuses on an organization's internal operations and provides an in-depth understanding of materials management, master scheduling, forecasting, production planning and provides the knowledge to apply this information across the extended supply chain.	CSCP focuses on the mastery of the extended supply chain, from organizations' suppliers through to the end customers. The CSCP designation validates professional understanding of supply chain management and the integration of operations across the extended supply chain.	Candidates learn the major process components (Plan, Make, Source, Deliver, Return and Enable) for managing and measuring the performance of a global supply chain by implementing the Supply Chain Operations Reference (SCOR®) model.
